

ENERGY EFFICIENCY INNOVATIVE FINANCING

SENSEI
EU HORIZON 2020 project

Sign up for SENSEI newsletter on the frontpage of www.senseih2020.eu

Developing smart energy services to
improve energy efficiency of the European
building stock.

Improving
energy efficiency as a
market-based procurable resource.

sensei
PAY-FOR-PERFORMANCE
to drive energy efficiency

STAKEHOLDER BENEFITS

WHY IS SENSEI IMPORTANT?

HELPS PUTTING CONSUMERS AT THE CENTRE OF THE POWER SYSTEM

Energy efficiency, on its own, is **valuable for consumers**. SENSEI will provide a way to increase the value of an energy efficiency intervention, through innovative pay-for-performance schemes.

SENSEI will provide a mechanism to steer energy efficiency interventions towards measures that are **beneficial for both building owners and the power system**.

MAKES ENERGY EFFICIENCY MORE ATTRACTIVE TO PRIVATE INVESTORS

Improving energy efficiency is a financing challenge rather than a technical challenge. Public funding is not enough; mobilization of **private capital is also needed**.

SENSEI will identify the conditions (risk sharing agreements, guarantees, etc.) under which the proposed transaction model can **improve the risk/return rating** of an energy retrofit project.
